section B

1 (i) a) She should consider upgrading to devices with large storage capacities so as to ensure efficient storage.
b) She should choose high resolution computers for ~~handle~~ her large files. better output.
c) The I/O devices should have good speed in terms of data processing.
~~d)~~ so as to increase productivity.
d) Large output devices e.g screens for Improved display of data.
e)

08

(ii) a) HDDs have moving parts while SSDs do not have moving parts.
b) HDDs do not loose data when power is off while SSDs lose data when power is off.
c) SSDs are easy to maintain ~~as~~ compared to HDDs
(d) SSDs are expensive while HDDs are cheaper.
(e) SSDs have larger storage capacities while HDDs are smaller in capacity.

02

(i) It ensures that data is not lost because of efficient storage.
(ii) Data is transferred one after the other ensuring smooth data transfer
iii) The CPU does not get overworked because processing is done one after the other.
iv) It is fast ~~of~~ for data processing hence no time wastage
v)

04

b) a) It is expensive to design because the resources used are not cheap.
(ii) Scarce resources for designing due to high demand.
iii) Poor quality designed processors due to competition.
iv) Some processors could be fake because of imitations.

04
